

Dear CPS Energy customer,

You are receiving this letter because you are located within one (1) mile of a site that will be under construction in the near future.

In a recent decision by the Electric Reliability Council of Texas (ERCOT), the statewide grid operator, mobile power generators were approved to be interconnected to various substations. ERCOT's plan for these generators is to utilize them to help with statewide grid reliability. These generators are owned and operated by LifeCycle Power and will only be used by ERCOT in extreme conditions to avoid system wide problems if transmission lines become overloaded. We expect these generators to be in place as a temporary solution for the next couple of years until new transmission is in place. ERCOT has released helpful information about the generators. You can access that information here: cpsenergy.com/ERCOTmobilegenerator

The generator locations were selected by ERCOT based on system reliability needs, available substation space and technical requirements. The generators will be installed in the next few months. You may see construction during this time.

All the construction activities associated with this project are located within CPS Energy property and easements.

We thank you for your support. For questions, please contact CPS Energy at 210-353-2222 or Nick Wright at NWright@lifecyclepowers.com

Thank you,
CPS Energy
